NOTICE

OSHA Approved Hard Hats and Safety Glasses Must Be Worn by All Personnel on US Stucco LLC Jobsites At All Times!

If your personnel arrive at our jobsite without hard hats and safety glasses, they will not be allowed on site.

Please forward this notice to the supervisor of your jobsite workforce for this project, so that he or she will be sure to bring sufficient hard hats and safety glasses, and will advise your personnel of this mandatory policy. Thank You,

Project Safety Orientation and Procedures

Compliance with Project Procedures:

US Stucco believes that sites under our control must be as safe as we can make them – not only for our employees, but for all subcontractors, vendors and visitors, whether during work hours or after we've left for the day. We comply with OSHA regulations, and have some requirements beyond OSHA's, as do some of the owners for whom we work.

All Emergencies: Call 911

First Aid supplies are available at the job site, but should also be provided by each subcontractor, sufficient for their scope of work and size of crew. Contact your supervisor or an US Stucco superintendent or foreman for assistance. Any accident, no matter how small or seemingly insignificant, must be reported to US Stucco Supervisor or Manager. Subcontractors are expected to provide their own fire extinguishers, particularly when they do hot work. In occupied buildings, the owner's fire fighting equipment should be used only as a last resort.

Planning:

All trade foremen must meet with the US Stucco Supervisor early each day to discuss the nature of the work they will be doing that day, what areas of the building they will be working in, and any other trades or people that could be affected by the work. Weekly and monthly planning "look -aheads" are required on larger projects.

Telephone:

Personal phone calls must be made on personal cell phones or public pay phones, not on US Stucco field office phones, US Stucco cell phones and especially not client/owner's phones, except in case of emergency.

Site Visitors:

ALL site visitors, including insurance company and union representatives, MUST have permission from the US Stucco Supervisor before entering the work area, and must be escorted at all times by the US Stucco Supervisor or designee. All visitors must wear appropriate safety equipment.

Dress, Behavior, Work & Breaks

Proper attire is required for everyone: specifically, long trousers (no shorts), work shoes (no soft footwear) and T-shirt (as a minimum). Tank tops are prohibited. Clothing may not have designs or wording which might offend a client, visitor or the public.

Eating, drinking and smoking are allowed only in places designated by the US Stucco Supervisor, and only at times designated by US Stucco Supervisor. Eating or drinking is not allowed in finished areas. Smoking is not allowed in work areas.

Loud or offensive language, sexual harassment, and fighting will not be tolerated.

Cigarette butts must be disposed of in proper receptacles, as must lunch wrappers, drinking cups and other trash.

Workers may not enter areas, which are not part of their contract.

Parking, if allowed on the job site, will be limited as to the area and quantity as designated by the US Stucco Supervisor. Vehicles not parked appropriately may be ticketed and/or removed from the site.

Clean up:

Everyone is required to clean up after themselves. All areas must be left "broom clean" or in a condition satisfactory to the US Stucco Supervisor, at the end of each day. If US Stucco must clean up after a subcontractor at the end of the day, the subcontractor will be backcharges at US Stucco's cost, including any incurred overtime, plus a 25% penalty. Specific dust control procedures may be necessary on some projects.

Security:

Security must be maintained at all times. Some sites may require that construction personnel be assigned a contractor's badge with a designated ID number to be worn in a visible location at all times.

Construction personnel must enter and exit building through a designated entrance/exit as designated by the US Stucco Supervisory Person. Locking doors are not to be wedged open.

Each subcontractor is responsible for the security of his or her own tools, materials, etc.

Safety: Everyone is Responsible

If you note any unsafe conditions, bring them to the attention of the US Stucco Supervisor.

Priority Safety Requirements:

Everyone on site must comply with US Stucco Safety Policies, OSHA Regulations and any state, local or owner safety requirements and the US Stucco Safety Manual, which is available from the US Stucco Supervisor. The following calls your attention to some of your requirements, which may exceed OSHA regulations:

General:

HARD HATS AND SAFETY GLASSES ARE REQUIRED FOR EVERYONE ON SITE, WITHOUT EXCEPTION, AT ALL TIMES, except in designated break areas, during breaks.

The use, possession, sale, concealment, transfer or presence in the body of illegal drugs (or their metabolites), controlled substances, marijuana, mood or mind altering substances, designer and synthetic drugs, alcoholic beverages or drug paraphernalia on site is strictly prohibited. Violators will be escorted off site immediately, and the appropriate law enforcement agencies will be notified.

The use, possession, sale or concealment of firearms or facsimiles of firearms is strictly prohibited, and may be construed by US Stucco as threatening. Appropriate law enforcement agencies will be notified.

Electrical:

Ground-Fault Circuit Interrupters (GFCIs) are required on ALL electrical equipment, at the outlet, not at the end of the extension cord, unless the circuit is on a GFCI breaker. The GFCI must be tested (by pushing the “test” button) at the start of each day. Extension cords must be rated “hard service. “ Damaged electrical cords must be removed from the site or immediately repaired by a competent person. Electrical tape is not an acceptable means of repairing damaged insulation.

Electricians working with exposed current-carrying conductors must comply with OSHA regulations regarding work area barricades, use of PPE, etc., and must inform the US Stucco Supervisor when they are working “hot”.

Employees must have their own locks when Lock-out/Tag-out regulations apply.

Construction personnel must use designated power plug outlets as authorized by the US Stucco Supervisor.

Powered Equipment

Employees may not be assigned to work within 6ft. of powered equipment, especially lifts, Lulls, loaders, rollers and trucks unless their work is directly related to the piece of equipment.

FALLS:

OSHA’s fall protection, scaffold and ladder regulations are strictly enforced. No one may climb scaffold cross braces or any portion of a scaffold frame not designed by the manufacturer as scaffold access. Any subcontractor erecting or using a manufactures scaffold on an US Stucco jobsite must inspect it at the start of each shift, using the US Stucco inspection Checklist for Manufactured Scaffolds.

Defective ladders must be repaired in a manner that meets manufacturer’s specifications or they must be removed from the jobsite or destroyed and discarded. No one may stand or climb on either of the top two steps of a stepladder or on structural brackets on ladders, which are not steps.

THE UNDERSIGNED acknowledges and agrees to all the terms and conditions:
